

Scenario 11: Creation and usage of webservice services

- Create the topology, assign the IP, subnet and gateway to devices as show in the figure above.
- On HTTP server go to services tab → select HTTP service → enable HTTP protocol
- Click on new file and copy the HTML code below:

```
<div class="bgimg">
<div class="topleft">
<p>MAHE, Manipal</p>
</div>
<div class="middle">
<h1>Welcome to Networking Workshop</h1>
<hr>
<p>09 December 2019</p>
</div>
<div class="bottomleft">
<p>Greetings From MSOIS</p>
</div>
</div>
```

- save it as "**index.html**"
- On DNS server go to services tab → select DNS service → enable DNS service
- **Name = msois.com**, **address = 10.10.10.254** and click save.
- From PC0 or 1 → Desktop → web browser → access website by entering url as **msois.com** → you will be presented with a web page.
